

ENGIS creates energetic innovation by diversity of generation sources, storage and electricity sharing

The future is here - The energy sector is changing fast and we are changing with it! The energy revolution from renewable sources is speeding up, thanks to storage capabilities and efficient consumption.

This is the reality of our personal vision at ENGIS and the national vision of the State of Israel. We know how to make this vision come true.

At ENGIS we believe in energy generation from renewable sources integrated with energy storage to lead for energetic optimization and efficiency.

We call for independency in Energy, creation of your own **PPG® – Personal Power Generation.** ENGIS specializes in trusted storage solution with the most efficient and advanced technologies, already installed globally.

Our solutions include:

- ◆ Design and optimization of the energy storage system, including economic feasibility study in a variety of scenarios.
- ◆ Supply
- ◆ Installation
- ◆ Electrification
- ◆ Service, Operation and Maintenance.

Engis is committed to full range of service and warranty actions to enhance production and electricity supply during operation period. Energy storage is the perfect resource for factories, hospitals, solar developers, shopping malls, communities and any entity with high energy expenses.

Engis enables efficient management and control of your energy resource to reach optimization of one of your significant business' expense. NOW is the end of expensive, pollutant generator backup with complex maintenance. Move towards silent, clean, safe and durable storage.

Energy Storage creates cost saving and is a continuous, high reliable energy supply. Your wise infrastructural investment with quick Return. With ENGIS you have a partner along the way.

Send us your energy consumption and we will lead you to Personal Power Generation.

Advanced Energy Storage Systems is ENGIS.
